

## Art – Class 2

This week we are going to link our art to our Science topic of Light and Shadow.

Shadows indoors:

We have been noticing shadows made outside when the sun is bright or you may like to investigate shadows indoors using a torch or lamp.

We know that shadows are made when the light is blocked by an object.

Have a go to make some shadows using your hands , everyday objects or toys.

When you have created a shadow have a go at tracing around the outline and shading it in. Your parents may be able to help you to create a silhouette of a face profile – be careful not to look directly at the light source.

Shadows outdoors:

If the sun is out look around for shadows in the environment – eg trees, equipment in the play park.

Have a go to draw the object and the shadow it makes.

I am looking forward to seeing your shadows and trying to guess how they were made!
